They dominated the budget smartphone market and were way ahead of the market competition. The Xiaomi Redmi 5A was one such device that made Xiaomi capture that segment. It offered limited specs but had an overall premium feel at the end. Though the device didn't lose its charm for quite a few years, in 2022, it has. It would be a surprise if the smartphone is still functioning as of now, and if it is working fine, you're definitely an exceptional user. On the contrary, the smartphone has become outdated, the software and hardware performance have slowly reduced to null. Perhaps, it would be the perfect time to sell old phone and buy an upgrade for Redmi 5A. Also read- AMOLED vs LCD: Detailed Comparison, Which One Is Better? Redmi 5A Specifications: Launched in 2017, the Redmi 5A features a 5-inch HD LCD display and a pixel resolution of 720 x 1280. The device has a 69 per cent screen-to-body ratio and comes with a traditional smartphone design. On the CPU side, it is powered by a Quad-core Snapdragon 425 chipset and is coupled with Adreno 308 GPU. The 5A comes in two variants 2GB RAM and 16GB internal storage and 3GB RAM and 32GB internal storage. In addition, the storage is expandable up to 128GB via a microSD card. On the camera part, the Redmi 5A features a 13-megapixel lens with an f/2.2 aperture and comes with a PDAF sensor. The front camera is a 5-megapixel shooter with an f/2.0 aperture. The device does have a 3.5mm jack for external audio. We have a 5,000mAh non-removable battery that can give juice for a day on the battery side. Also read- WhatsApp Photo Sticker: Which is the Best App to Use? The answer would be yes. The smartphone was launched back in 2017, and it has been four years, to be precise. I'll mention the cons of Redmi 5A down below: 1. Old smartphone design Since the device was released back in 2017, it is following the traditional smartphone design. And trust us, it is not a good design in 2022. The extra-large head and chin are not what a 2022 smartphone looks like. Instead, we have a sleek, slim and bezel-less smartphone these days that offer a beautiful viewing experience. Also read- Best Guns in Battlegrounds Mobile India (BGMI) to Always Win Gunfights 2. Poor performance In the initial years, the smartphone's performance was quite acceptable. It could run all the games & apps and had minor heating issues, but the software updates stopped as the smartphone got older. Since then, the device started having lagging problems and performance crunch. Perhaps the outdated hardware specification has made the smartphone a not-to-have device in 2022. 3. Camera issues The device has camera issues that can't be fixed. It only features a single camera with multiple problems, from dynamic range to colour calibration to macro and night mode shots. If I can put it correctly, the 13-megapixel camera lens is no match for today's budget camera. The 2022 budget smartphones have a triple and quad-camera setup integrated with a camera AI that captures fantastic photographs. How to sell my old Xiaomi Redmi 5A and get excellent buyback value?
